## About

Hi! my name is Erkan, I'm currently living in Melbourne and on a journey to becoming a full stack developer, I'm learning daily in regards to coding and how a website is formed together. From the age of 12 I would install linux OS operating systems and sometimes try and install os from scratch and had a fascination for code and how we communicate from human to computer via terminal.

### Why a career change into full stack developer?

I wanted to follow my deep core memory of what used to make me hyped and excited to do a certain activity and that was coding. My past career choices also didn't align with my wants and needs. I've heard a lot of good things about the coding work culture, and the flexibilities of working as a developer.

### What are your hobbies?

I love to code, read books, Weightlifting, marathon running, video-gaming, socialising

### Where in the world have you traveled?

I've travelled to Japan, Bali, Turkey, New-Caledonia, Thailand, I've been to lots of locations around Victoria, visited South Australia, Queensland and Sydney.

### Interesting fact about you

I'm born Australian but Turkish by background, I've run a 21km Marathon and have done some weight lifting competitions. I used to work as an Aircraft Mechanical Engineer for Qantas Engineering, my favourite place I've ever been to was New-Caledonia.

### Experience in coding

**HTML/CSS:** Beginner to Intermediate

**Javascript:** Basics

**Java:** Basics

**C#:** Basics

Experience

Currently studying at Coder Academy on a journey of knowledge on how web pages form together. I am looking forward to the future. I have gained knowledge through my years on just the basics such as in Java, C#, Javascript and of course web design. I look forward to furthering my knowledge and other code languages. Learning at an accelerated pace definitely seems daunting however, once you break down things into daily tasks it would surprise you how much gets done.

**Amotta**  
May 2021 - Aug 2022  
Headline Developer

Working in a mighty biscuit factory, full of sweet tasting biscuits sure felt like the real life version of willy wonka. My responsibility consisted of Disassembling/Reassembling, cleaning, setting and operating machinery. Once the machine was up and running, it was my duty to monitor and maintain biscuits at a certain weight and dimension. Precision was key and communication and team work were also important.

**Viny Industries**  
Apr 2016 - Feb 2021  
Master Jet Operator

Working in a cartoon factory as popular as Viny was a pleasure. My responsibility mostly consisted of setting up and operating machine tools to manufacture precision metal parts, instruments and tools. I also operated a water jet machine that required precise Auto-Cad design in order to cut the necessary components to fit a mould that would operate on big machines that would cut millions of boxes throughout its life.

**Qantas**  
Jan 2010 - Feb 2016  
Junior Maintenance Engineer

Working for Qantas was one of my biggest personal careers. It involved lots of study, resilience and hard work. Four years completing an apprenticeship travelling to Anson in Victoria all the way to Brisbane to gain experience in the work field was like none other. Throughout my apprenticeship and industrial period, work mainly involved lots of assembling, inspecting, testing various mechanical components, problem solving and fault finding, understanding mechanical drawings and instructions. All of this gave me the experience to have great mechanical mindset and improved written and verbal communication.

**Woolworths**  
Feb 2007 - Jan 2010  
Retailer

Working here at a younger age taught me several social skills as well as responsibility and being punctual. Most of the experience gained was revolved around customer service and verbal communication. Resolving any issues a customer might have or assisting them in finding the item they were after, as well as reentering the shop back to front to fill bins with products as well as setup the way shelves would look visually aesthetic was important to gain customers attention, attention to detail was also important.

**Education**

Currently: Studying at Coder Academy to gain a career in the coding field

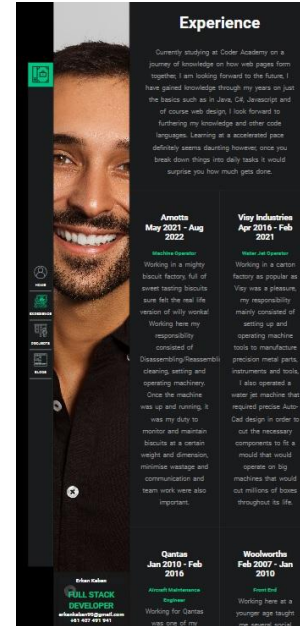

**Highest degree earned:** Aeroskills Certificate IV

**Second-Highest degree earned:** Certificate II in Electro-Technology

**Secondary Schooling:** Gladstone Park Secondary College (graduated 2009)
